160/100 blood pressure can also be read as 160/100 mm Hg, or 160/100 millimeters of mercury. The 160 mm Hg Systolic refers to the pressure in the arteries when the heart beats, and the 100 mm Hg Diastolic is the pressure in the arteries between heartbeats. When determining if 160/100 is a good blood pressure, we looked at the American Heart ...

When you read microphone specifications, it is extremely important that you understand how to interpret them. In most cases, the specifications can be measured or calculated in many different ways although the standard IEC 60.268-4 is the common ground for this.

### **How to read microphone specifications and understand mic ...**

Sound pressure or acoustic pressure is the local pressure deviation from the ambient (average or equilibrium) atmospheric pressure, caused by a sound wave. In air, sound pressure can be measured using a microphone, and in water with a hydrophone. The SI unit of sound pressure is the pascal (Pa).
